# OVERVIEW FROM THE MANAGING DIRECTOR, DR STEFFAN GEORGE.

**At the time of writing, despite tough trading conditions, 2023 is looking like it will be yet another record year for Sold Secure.**

Work continued to come in at pace, not only with new products being developed and suppliers wanting the coveted Sold Secure badge, but also with products being re-submitted for their annual audit testing so they can continue to claim approval (as don't forget Sold Secure approval requires products to be re-tested every year!).

Not only do products need regularly checking but the standards themselves and tools used also need to be kept up to date, so throughout the year we continued to keep an eye on them and update where necessary based on feedback from industry, police and insurers.

Of course no test house can stand still and one of the outcomes of the move towards more 'grinder resistant' products due to the Sold Secure standards, was the need during the year to purchase a specialist dust extraction unit. Health and Safety is important for us (and to be honest it helps keep the lab cleaner too!) and the beauty of the financial independence due to the commercial success of the company is that we can invest in things like this, and the hardness tester that we've also purchased – a useful tool that will help not only with testing but also help us provide further information to customers when products fail.

The company's presence at MLA Expo was augmented in 2023 by not only having a separate stand to the MLA, but also having a test area set up which was a resounding success as it allowed Guy to demonstrate the kind of work we do, and how thorough the testing process is! The session that I saw was 'standing room only' and we've had some great feedback from it so are planning to repeat it at Expo 25.

Work has continued on the Sold Secure website, concentrating on trying to get the best user experience as possible and looking at increasing the SEO for product pages to help add to the benefit that Sold Secure approval provides. The website being of course only one of the promotional avenues for the company. We've continued our close work with the Police and Secured by Design. We were delighted to welcome a team of West Midlands Police motorcycle officers to the lab for a visit, as well as hosting a Secured by Design development day with representatives from Warwickshire, Staffordshire, Hertfordshire, Northamptonshire and Nottingham forces.

We are looking forward to 2024 and the challenges it will no doubt bring, challenges that as usual we'll address head on and deal with. One of the most important developments will be the launch of SS504, our standard for Smart Locks. Having our experience predominantly in mechanical locks, it's a massive step for us to get involved more in the digital side of things, and quite timely as these devices become more popular.

I sincerely hope you enjoy this 2024 Catalogue, yet again integrated with the MLA Handbook, and again brought to you in collaboration with Klarents Media Ltd as publishers. The team and I look forward to continuing to work with existing and new customers over the next 12 months.

Yours sincerely,

**Dr Steffan George**  
Managing Director

”

# WHY GET YOUR PRODUCTS TESTED BY SOLD SECURE?

You'll read a lot about Sold Secure in this catalogue but if you're a manufacturer why should you have your product approved? What do you actually get for your money and why choose Sold Secure over other test houses?

Firstly it's important to realise the benefit of independent third party testing. Whilst you may believe that you have the proverbial 'best product in the world' and have your own test reports to prove it, wouldn't the general public or customers expect you to say that anyway? You are at the end of the day wanting to sell product and therefore the perception may be that you'd 'say anything' to sell it. However, if an independent third party, who has no vested commercial interest, says that the product has met a certain criteria, then it adds gravitas to the claims about the product.

The next thing to look at is what testing it's claimed to have met. Yes, manufacturers will have their own in-house test specifications but what do these actually mean? You're better off testing to a recognised standard, something that people will understand and recognise. Yes, you can test to British Standards or European Norms and in some cases then this is arguably a very well recognised standard, but does it go far enough? Do they reflect what is happening out there in the real world; mimicking what thieves are doing? This is where the Sold Secure test specifications come into their own. Developed in conjunction with the relevant stakeholders (including police, insurers and the appropriate industry bodies) they are mostly based on attack test principles, using a certain amount of time and tools (depending on grade) for the product to be tested.

So why choose Sold Secure? First and foremost, there's the recognition. Sold Secure is recognised not only by the public, but most importantly by the Police Crime Prevention Design Advisors, Crime Reduction Officers & Architectural Liaison Officers (who promote the use of Sold Secure approved products) and insurers (a number of whom will require Sold Secure Approved products to be used in order to either provide insurance or provide a discount on the insurance premium).

How do we know this? Primarily based on the number of calls and e-mails we get from insurers directly and from the public highlighting how they need to verify approval for their

insurance, and secondly from the beeline the police make for the Sold Secure stand at any event we're at, eager to get their hands on the latest Sold Secure Approved Products Catalogue.

Another major benefit of using Sold Secure, according to feedback we get from customers, is the way we work with our customers. We've heard horror stories of other test houses taking in products and then sending back a 'bag of bits with a fail notice'. Sold Secure prefers to work with its customers to help improve the quality of products out there in the market place. We offer an initial free consultation to explain how the product will be attacked, look for any obvious weaknesses in the design/construction (whilst it's no guarantee that a product we pass, we feel that taking in a product for testing knowing that it's going to fail, whilst commercially perhaps more attractive in the short term, would be counterproductive for our desire to build long lasting relationships with our customers). We can also give an indication of what specification it should be submitted for and which grade it may be able to achieve.

A number of companies want to gain Secured by Design status for their products and in order to achieve this, 3rd party testing and approval is required on the products. A lot of Secured by Design customers take up the option of getting Sold Secure approval to then progress to becoming a Secured by Design company, and use the 'Police Approved Specification' SBD logo.

Last and by no means least there's the extra marketing support that can be obtained by Sold Secure Approval. All products that have passed Sold Secure test specifications are included in the Approved Products Catalogue and on the website, which not only provides contact details for the customer but also the ability to include a picture and detailed description of the product too. Don't forget the Sold Secure website is linked to by many authoritative websites including the Government.

## GET IN TOUCH!

If you've got a product that you think is suitable and want the benefits of approval, contact Sold Secure on **01327 264 687** or **sales@soldsecure.com** to discuss getting your products approved.

# ABOUT SOLD SECURE.

## HISTORY

Sold Secure was established in 1992 by Northumbria and Essex Police who combined two initiatives; Sold Secure and Partnership Against Car Theft (PACT), to form Sold Secure with the help and backing of the Home Office.

Sold Secure is now administered by the Master Locksmiths Association, in a purpose-built test facility at the MLA's head office in Rugby.

## PURPOSE

Sold Secure is an independent test house, dedicated to reducing the risk of theft by the assessment of security products.

We have close ties with the police and insurers who provide regular information regarding the methods of theft and the tools utilised by criminals in their area. This helps to maintain up to date specifications and means security products can be assessed in the light of the risk they are likely to encounter when in use.

## ORGANISATION

Sold Secure is made up of a small team of dedicated staff, who are committed to providing a world class service, raising the bar in security through using real-world test methods for certification of security products.

It is important to note that although Sold Secure is administered by the MLA and operates out of the same premises, it is a completely separate company to the MLA, with its own staff, legal entity, board of directors and separate accounts.

## TESTING, ASSESSMENT AND APPROVAL

Why test?

Testing provides evidential proof of security and gives the consumer peace of mind that a product is of an appropriate security level for the application, rather than merely relying on the claims of the manufacturer.

Many insurance companies recommend that their customers use Sold Secure approved products by giving discounts on policies, or in some instances insisting that Sold Secure approved products are used.

Secured by Design – the accreditation company from The National Police Chiefs Council (formerly ACPO) – recognises the benefits of Sold Secure testing and use our approval as part of their accreditation process, giving confirmation of the integrity of the product.

The police, particularly Crime Prevention Officers, also recommend the use of Sold Secure approved products.

Manufacturers and suppliers submit products to Sold Secure for testing and products which have met or exceeded the test requirements will display the Sold Secure logo.

The tests are performed to test specifications written in with input from relevant parties, such as insurers, police forces and industry specific organisations (such as the Caravan & Motorhome Club, and National Caravan Council for leisure sector related standards).

It is important to note that the relevant parties do not include manufacturers, as Sold Secure is completely independent.

The testing is carried out in-house with a team of specialist test engineers, all of whom are either Master Locksmiths in their own right or are experts in their field.

Using this highly experienced team of test engineers ensures consistency and acts as a 'worse case' scenario, due to significant product knowledge and knowledge of attack methods.

Testing is performed to our own Sold Secure Test Specifications, but we also test to a range of British and European Standards, such as BS EN 14450 for safe testing.

Furthermore, some Sold Secure specifications refer to British and European Standards such as BS EN 12209, BS EN 12320 and BS EN 1303.

It is our belief that manufacturers should understand what is involved in testing and how to improve their products, resulting in a higher standard of security products.

Testing is performed to our own Sold Secure Test Specifications, but we also test to a range of British and European Standards, such as BS EN 14450 for safe testing.

Furthermore, some Sold Secure specifications refer to British and European Standards such as BS EN 12209, BS EN 12320 & BS EN 1303.

It is our belief that manufacturers should understand what is involved in testing and how to improve their products, resulting in a higher standard of security products.

Therefore, we offer an initial consultation where the product is examined and the category and grade it should be tested to can be determined. We also provide up-front consultancy on any areas of weakness we may find, thereby saving the manufacturer from spending money on testing a product that may be likely to fail.

## APPROVAL CATEGORIES

There are multiple specifications that we test to, and each specification uses one of four grades of theft-resistance: Bronze, Silver, Gold and Diamond.

Please note however, not all specifications have all four grades.

The test specifications vary in the types of attack and tools used in the test. For example, caravan thieves operate differently to bicycle thieves, so caravan security products will need to withstand attacks using a heavier and more intensive tool list than the tool list for bicycle security products, with each attack also lasting longer. The following are some of the most common categories.

### Pedal Cycle

- Diamond grade products provide the highest level of security in this category, aimed at high value cycles. This is equivalent to Powered Cycle Gold.
- Gold grade products offer the next highest level of security, aimed at mid-to-high value cycles.
- Silver grade products offer a compromise between security and cost.

- Bronze grade products typically offer defence against the opportunist thief.

Thus, the consumer can choose the product which best meets their needs or the relevant insurance requirements.

Again, there are options for mobile use and solutions for the home environment.

Many cycles are stolen from unsecured garden sheds or garages, and we have tested ground anchors, shackles and security posts to help in this area.

Also see our category for domestic buildings to find products for securing sheds and garages.

### Powered Cycle

This category covers all powered cycle types, including motorcycles, motor scooters, e-bikes, and cargo e-bikes.

With around 40,000 to 50,000 motorcycles stolen in this country every year, motorcyclists have over a 3% chance of having their pride and joy stolen.

This figure can increase significantly in big cities like London.

Many of these are broken down for parts and less than a quarter are ever recovered.

A recent survey by the National Crime Intelligence Service (NCIS) based on the latest police figures on vehicle crime and performance bikes (500cc and above) has revealed some shocking statistics: more motorbikes are stolen in the UK than are bought new and it takes on average 20 seconds to steal a motorcycle worth £10,000.

A very high percentage of those stolen are taken from outside their owners' homes.

It may be interesting to note that a bike parked in a busy main road may sport several security devices but when parked at home, many owners leave their bike unsecured.

Sold Secure has two grades of Powered Cycle security: Gold and Diamond.

Using a tool list based on police and insurance information, products are tested to prove security for your motorcycle at a grade based on the risk of theft; i.e. the higher the risk, the higher the grade required.

There are a number of options for motorcycle and motor scooter security for use at home and when parked away from home.

*continued overleaf*

## Caravans

Statistics show that thousands of caravans are stolen every year and very few are recovered.

According to Home Office resources, caravans stolen from the UK have been found as far away as New Zealand!

Once again, we approve security systems using the tools that a typical thief would carry.

There are three levels of security approval:

- Silver rated products offer basic security, a cost-effective solution for the occasions when a caravan is stored in a good location, i.e. minimal risk.
- Gold rated products should be used when the caravan is stored in an area of higher risk, or for a prolonged period of time.

A separate standard with a Diamond grading was created specifically for the highest security wheel locking devices and offers maximum protection.

Ground anchors and security posts should be used for fixed security at the caravan's main storage point.

## Ground Anchors

On many occasions, for maximum security a simple lock is not enough.

Unless your bike, motorbike, caravan, boat, trailer or motor mower is fastened down, it may be possible to steal it, including the lock!

The answer to this is a ground anchor: when properly installed in your garage, drive or car park, these provide an 'immovable object' for securing your vehicles and other valuable outdoor equipment.

Where necessary, use these with an equivalent grade Sold Secure approved lock.

## Security Posts

An ideal way of preventing your vehicle from being stolen from your drive or car park is a security post.

They can be effective in securing several vehicles at one time. They can also be used to protect your parking space!

## Cars

Crime statistics indicate that the average car thief would wish to spend no longer than two and a half minutes gaining entry to a vehicle and driving off.

Our attack test acknowledges this criterion and tests the product for a full five minutes.

Therefore, any automotive related product bearing our logo will improve your chances of finding your car where you left it.

With increasing reliance on electronic security for vehicles, theft has turned either to burglary in order to obtain vehicle keys, or thieves have gone high tech and are using diagnostic or relay type machines to fool the vehicle into thinking the key is present, and thereby driving vehicles away.

In response to this, and as we predicted, the days of the mechanical steering wheel lock are well and truly back!

Catalytic converter theft is on the rise again but not to worry as Sold Secure can approve devices aimed at securing them.

## Commercial Vehicles

The theft of a commercial vehicle is always made worse by the loss of its contents and the disruption to your business.

We have approved a range of products designed to protect the vehicle and its cargo.

With the ever-increasing amount of tool theft from tradespeople's vans, after market van door locks are becoming increasingly popular. Also, pedal boxes are helping the fight against theft of vans.

## Padlocks

Recent investment has seen the testing of padlocks extend to a new Diamond level, on a par with CEN Grade 6 meaning that all top levels of CEN Rating can be achieved Bronze (CEN 3), Silver (CEN 4), Gold (CEN 5) and Diamond (CEN 6).

## Fencing

With the importance of fencing to secure property perimeters, a new specification has been developed aimed at domestic and light commercial fencing, to provide an element of security and making a thief's life that little bit more difficult.

## Firearms Cabinets

Whilst BS7558 has been around for a while, seeing as it is a relatively low level of testing for such an important area, we worked with our colleagues at Secured by Design to develop a Sold Secure specification which at Bronze level equates to BS7558, but at Silver and Gold it encompasses BS7558 testing but then takes steps further to ensure significantly higher security, making these firearms safes, rather than simply secure cabinets.

## Lock Cylinders and Security Hardware

SS312 for Lock Cylinders, and SS301 for Security Handles & Escutcheons have recently been included in PAS24, which is the easiest way to comply with the security requirements of Building Regulations. Not only is this a great step for Sold Secure, but provides manufacturers with alternatives to TS007 which are still in compliance with PAS24.

## ANNUAL AUDITS

As part of the Sold Secure approval, products have to be submitted each year for Annual Audit.

The audit ensures that there have been no changes in product design, material, heat treatment, etc., as these have been known to differ in production.

Annual Audits can show up to a 25% to 30% failure rate, sometimes due to a change in specification from an outside supplier, unbeknown to the product manufacturer. This is often due to inconsistent hardness or components being made from different materials to the original sample.

This provides an additional benefit to the manufacturer in that it exposes any quality issues in production, as even the most stringent quality controls can miss errors.

## BENEFITS TO LOCKSMITHS & RETAILERS

The main benefit to locksmiths is the ability to sell products that have been approved by a test house that is already familiar to and recognised by customers.

Our website also suggests that MLA approved companies are used for the supply and fit of approved products.

This is for two primary reasons:

- Sold Secure approval is only valid when a product is fitted correctly.
- MLA locksmiths are vetted, inspected and qualified, which gives the public better peace of mind that they are using a legitimate, qualified tradesperson.

This also fits into the requirement from some insurance companies that in certain instances Sold Secure approved products must be fitted by an MLA locksmith.

**If you are interested in getting a product approved, please do not hesitate to contact us: email [sales@soldsecure.com](mailto:sales@soldsecure.com) / [admin@soldsecure.com](mailto:admin@soldsecure.com) or call 01327 264 687.**

### Disclaimer:

While great care has been taken to ensure that the content of this Catalogue is correct, neither Sold Secure nor the publisher of the Catalogue accepts responsibility for any error, omission or claims made in the Catalogue. Opinions expressed in editorial contributions and product descriptions/adverts within this publication are those of their respective authors, and are not necessarily shared either by Sold Secure or the MLA. Any adverts do not necessarily mean the product in question is Sold Secure approved.

The Approved Product list gives the reader an insight into the more effective security products, it does not give any form of guarantee that these products will be 100% effective in preventing crime. Also, it does not guarantee that these methods/products are suitable for specific applications. It is the responsibility of the equipment supplier and equipment purchaser to ensure that any system is suitable to its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Whilst at the time of print information is up to date, products are tested annually at different times of the year and/or throughout the year, and changes such as removal of products, downgrades, as well as upgrades, can happen. We recommend you check the live website ([www.soldsecure.com](http://www.soldsecure.com)) to ensure the current approval status of a product.

# SECURED BY DESIGN.

Secured by Design is the UK's official police security initiative with the specific aim of reducing crime and helping people live more safely. It is a not-for-profit organisation, self-funded through its prevention activities.

Secured by Design is the UK's official police security initiative with the specific aim of reducing crime and helping people live more safely. It is a not-for-profit organisation, self-funded through its prevention activities.

Secured by Design celebrates its 35th anniversary in 2024, having been created in 1989 following the housing boom of the 1960s-1980s when there was a huge and urgent demand for housing, with estates being built quickly and often cheaply without any basic security. This resulted in a significant rise in burglary and Secured by Design was set up to combat this.

Secured by Design has worked with businesses, industry and standards authorities at home and abroad for many years, working closely with the Master Locksmiths Association who are trade association members of Secured by Design, and Sold Secure to ensure that information on the latest crime trends are built into standards. This resulted, for example, in SBD working with Sold Secure to develop their Catalytic Converter theft protection standard, and also promote their SS312 Diamond standard for lock cylinders.

Secured by Design has also played a significant role in the introduction of a number of new standards, such as TS 007, a joint Door and Hardware Federation (DHF)/Glass and Glazing Federation (GGF) standard for cylinders and adopted by BSI for its own Kitemark scheme, as well as TS 008 and 009, two new standards for letter plates and boxes published by the DHF.

## Product based accreditation scheme

Secured by Design developed a product based police accreditation scheme for products or services that have met recognised security standards. These products or services – which must be capable of deterring or preventing crime – are known as being of a 'Police Preferred Specification'.

The Police Preferred Specification has now been operating for 25 years. It requires all security products to meet or exceed the performance expectations documented within the relevant security standard for that type of product. It ensures that the product is sufficiently robust to resist physical attack by casual and opportunistic criminals.

Currently there are many hundreds of companies who produce over 7000 individual attack resistant crime prevention products in more than 30 different categories

## Secured by Design

### Police Preferred Specification

which have met the exacting Police Preferred Specification. This includes locks and hardware, bicycle and motorcycle security products, doors, windows, external storage, asset marking, alarms, CCTV, safes, IoT connected products, perimeter security products and many others.

Products that have met the Police Preferred Specification provide reassurance to the specifier, purchaser or user that the products have been independently tested to a relevant security standard **and** fully certified by an independent third-party certification body recognised by the United Kingdom Accreditation Service (UKAS), or tested **and** certified by an alternative approved body such as Sold Secure.

The Secured by Design focus is on the critical factors that combine to deliver a product's performance – design, use, quality control and the ability to deter or prevent crime. Better quality means these products last longer too, making them more cost effective and leading to greater sustainability in crime prevention.

With the rise in IoT (Internet of Things) and smart devices being sold in the UK market, a popular one being smart locks, new legislation has been brought in which requires manufacturers, importers and distributors to ensure that minimum security requirements are met in relation to consumer connectable products. The Product Security and Telecommunications Infrastructure Act 2022 has been enacted into law, with companies having until 29<sup>th</sup> April 2024 to achieve compliance.

It's therefore vitally important for companies to ensure their IoT products are built as securely as possible and an integral part of doing so is getting their products appropriately assessed and accredited for both their physical and cyber security attributes. Secured by Design and Sold Secure will be working to ensure that products that require it are certified to cover both mechanical and smart security, with Sold Secure providing physical testing and supporting the Secured by Design Secure Connected Device accreditation scheme, encouraging companies to focus on the cyber security side of their smart products.

Secured by Design is the only way for companies to obtain police recognition for security-related products in the UK.

# SOLD SECURE 2023 PROMOTION.

The approval of Sold Secure continues to get widespread promotion, as the use of our approved products is one of the best ways to reduce crime and avoid theft.

In 2023, Sold Secure was featured in online press as well as print media.

## CYCLING NEWS ONLINE EDITORIAL

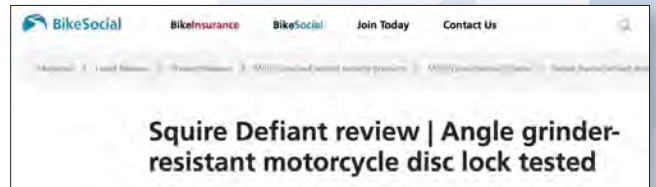

A Cycling News online editorial from July 2022 on the best bike locks featured a mention that:

“In the UK, Sold Secure is an independent testing organisation. Lock makers submit samples of their locks to Sold Secure, who then use a variety of methods to try to break them”.

## BIKESOCIAL / BENNETTS ONLINE EDITORIAL

A 2023 Online editorial on reviewing a Squire Motorcycle disc lock mentioned Sold Secure Powered Cycle diamond standard along with a link through to the Sold Secure website.

## OPEN DAY WITH VISITS FROM SECURED BY DESIGN & OTHER POLICE FORCES

We hosted a Secured by Design Development Day, which demonstrated our rigorous testing methods that support crime prevention to representatives from Warwickshire Police, Staffordshire Police, Northamptonshire Police and Notts Police.

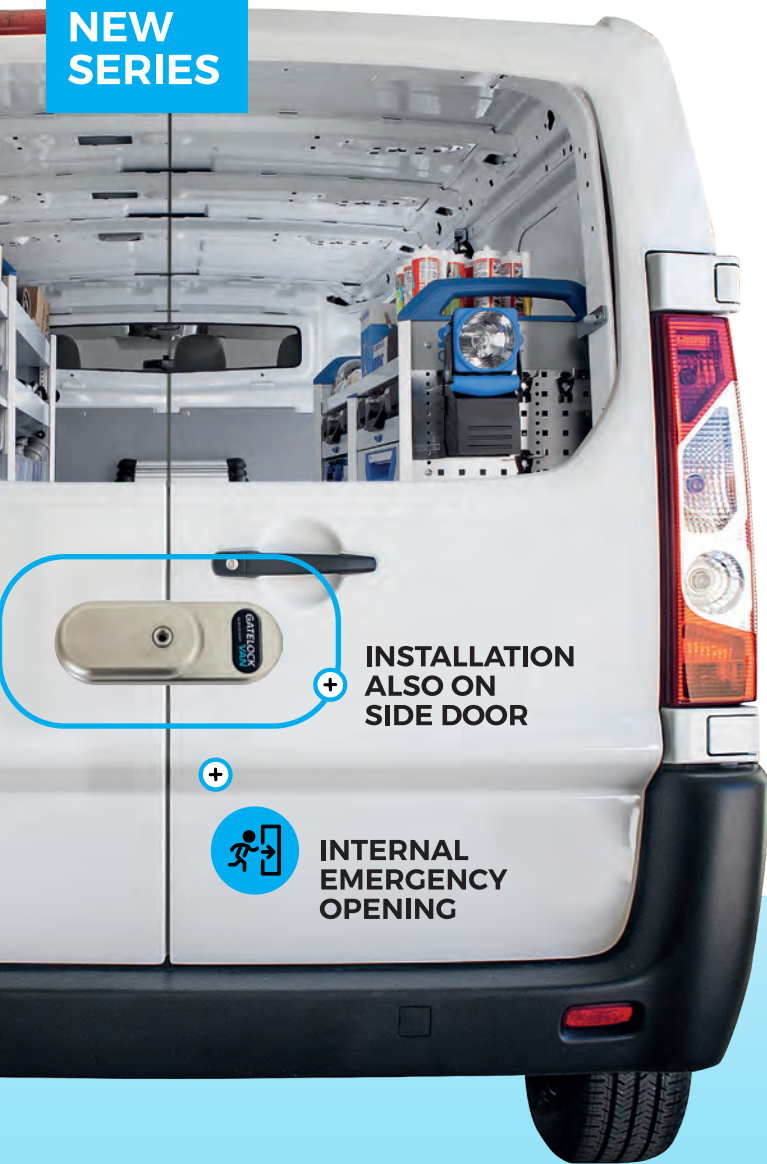

**MOTO GUARDIAN PRINT EDITORIAL – ISSUE 3 2023**

A print editorial in Issue 3 of the Moto Guardian features a full story on Sold Secure about testing, assessment and approval, Sold Secure Approval categories to a background story on Sold Secure.

**DESIGN BUY BUILD PRINT EDITORIAL – ISSUE 63 2023**

In Issue 63 of Design Buy Build, a feature on Domestic Door and Window Security included details of Sold Secure SS312 and SS301, with information of each specification. The issue also featured a print advertisement.

# SOLD SECURE SPECIFICATION INDEX 2024.

## GENERAL

- SS 00** Sold Secure Product Certification
- SS 01** Sold Secure Tool List
- Tool list A – Light manual
  - Tool list B – Medium manual
  - Tool list C – Heavy manual/light electrical
  - Tool list D – Very heavy manual/light electrical
  - Tool list E – Medium electrical
  - Tool list F – Heavy electrical
  - Tool list S – Specialist tools
  - Tool list P – Plant
  - Tool list V – Vehicle mechanical
  - Tool list I – Vehicle electrical
  - Tool list M – Asset marking

## AUTOMOTIVE – MECHANICAL

- SS 101** Specification for Mechanical Security Systems for Powered Cycles (Motorcycles/Electric Cycles)
- A two level attack test (Gold and Diamond) and uses tool lists A, B, C for Gold and A, B, C, D02 and D03 for Diamond.
- SS 102** Specification for Mechanical Security Systems for Motor Vehicles
- A three level attack test (Silver, Gold and Diamond) with tool lists A, B and C for Gold, and A, B, C and D01, D02, D03 and D06 heavy tools for Diamond.
- SS 103** Specification for Mechanical Security Systems for Caravans
- A three level attack test, including:
- Bronze – Tool list A complete
  - Silver – Tool list A and B complete and part of tool list C, including C01, C06, C10, C13, C16
  - Gold – Tool list C complete and part of tool list D and S, including D01, D02 and S01, S02, S15
- SS 104** Specification for Mechanical Security Systems for Pedal Cycles
- A three level attack test, including:
- Bronze – Tool list A complete
  - Silver – Tool list A complete and part of tool list B, including B05, B06, B07, B09, B10, B11
  - Gold – Tool list A complete and part of tool list B and C, including B01, B02, B03, B05, B06, B07, B08, B09, B10, B11, B14, B15 & C01, C03, C04, C05, C06, C07, C08, C10, C13, C14, C21

- Diamond tool list A, B and C complete

- SS 105** Specification for Ground Anchors and Security Posts
- A four level attack test, including:
- Bronze – Tool list A
  - Silver – Tool list A and B
  - Gold – Tool list A, B and C
  - Diamond – A, B and C complete and part of tool list D and S, including D01, D02 and D03b, and S01, S02
  - SS 106 Specification for Mechanical Security Systems for Motor Scooters
- At two level attack test, including:
- Silver – Tool list A and B complete and C01, C04, C05, C06, C07, C08, C10, C13, and C14
  - Gold – Tool list A, B and C complete
- SS 107** Specification for Mechanical Locks for Motor Vehicles
- A single level attack test with:
- Gold – Tool list A, B, C and V complete
- SS 108** Specification for Mechanical Security Systems for Construction, Industrial and Agricultural Equipment and Associated Trailers
- A single level attack test with:
- Gold – Tool list A, B, C, D, E and F complete
- SS 109** Specification for Locking Wheel Nuts
- A two level attack test with:
- Silver – Tool list A, B, C complete and part of tool list S, including S05, S06, S07, S08, S09.
  - Gold – Tool list A, B, C complete and part of tool list S, including S05, S06, S07, S08, S09
  - SS 110 Caravan Wheel Locks
  - A single level attack test with:
  - Diamond – Tool list A, B, C, D, E, F, S, P, V and I

## AUTOMOTIVE – ELECTRICAL

- SS 203** Specification for Tracking Systems for Motor Vehicles
- A three level performance test using Silver, Gold and Diamond using automotive industry performance standards for use within the UK and Europe-wide.

## DOMESTIC – MECHANICAL

- SS 301** Specification for Mechanical Security Systems for Domestic Building
- A three attack test, including:
- Bronze – Tool list A complete
  - Silver – Tool list A and B complete
  - Gold – Tool list A, B and C complete and D02
- SS 302** Specification for Security Cabinets for Fire Arms
- A three level attack test, including:
- Bronze – BS 7558 tool list
  - Silver – Tool list A, B and C complete
  - Gold – Tool list A, B, C and D complete

**TVL Security Ltd**  
TVL - CATPro

Sometimes, you need to protect what's on your van as much as what's in it. Catalytic converters and diesel particulate filters are routinely held in place with fixings that can be removed with tools and so are often under attack from thieves. CATPro is a corrosion-resistant, vehicle-specific system that uses either a boron chain and clamp to secure the exhaust system to the chassis, or a plate system to reinforce the manufacturer's fixing points.

**CHAIN**

**Artago Secure S.L.**

Artago Stone 14.100, 14.120, 14.150 & 14.170

Pewag VKK10x35 is the smaller and lighter weight option to the VKK12x45 and VKK14x52 chains. The chain is manufactured to the same high quality standards as its bigger brothers and is produced using the same materials and production techniques, all of which ensures maximum toughness for its size. Suitable if a lighter weight option is required. VKK10x35 weighs just 2.1kg per metre.

	B	S	G	D
Pedal Cycle (Formerly Bicycle)			✓	

Pewag VKK14x52 is the largest and toughest of the Pewag VKK range of security chains providing maximum levels of resistance against bolt cropping, hacksawing and freezing. Increased material diameter makes the chain more time consuming to cut with an angle grinder. Manufactured to the highest possible quality standards which ensures that this chain possesses the highest level of security available for it's size. Weight 4.5kg per metre.

**Assa Abloy (Yale)**

YCL3/10/110/1CH YALE CHAIN  
1100MM YCL3/10/180/1CH YALE CHAIN  
1800MM

Pewag VKK12x45 security chain is manufactured to the highest possible quality standards and is used extensively for the securing of motorcycles and property. The chain offers an unbeatable blend of tensile strength and toughness made possible because of the clever combination of material alloy composition and careful heat treatment processes which results in the ideal core and surface hardness values. Chain weight is 3.4kg per metre.

Our most economical high-security chain featuring Sold Secure Pedal Cycle Gold. The IVY 9210 features 10mm square section chain links enclosed in our unique TexKF sleeve. This woven nylon material has two properties to make every cyclist smile: firstly it repels dirt and moisture so oil from your bike's drivetrain can be quickly wiped off. Secondly, the woven threads foul and block cutting tools. Any potential attack requires more time, more tools and more effort.

**ETOOK**  
ETOOK 600 U Lock

The lock body is made of 13mm square magnesium steel with heat treatment, its strong and high toughness well prevents from being sheared, thumped, sawed and drilled. The lock cylinder uses advanced Switzerland technology with anti-drilling piece, only 0.3-0.6mm thickness and snaked shaped, which can effectively prevent technical stealing. Attached patented lock bracket, easy to carry the lock when riding and easy to take it out.

DIB 190 D Lock

Motorcycle-grade D-locks with a genuine 16mm thick double-locking hardened steel shackle. Far superior internal construction to the vast majority of D-locks on the market – these are serious D-locks! Various sizes available. Recommended for motorcycles and cycles, and also for securing chains up to 16mm gauge. Police SBD approved. Supplied with three keys. Can be keyed-alike as a set at time of order, including with the RoundLock.

**Trelock GmbH**  
U6 L U-Lock

The top model U6 L from TRELOCK is identical in construction to the BS 650 and thus one of the most secure locks in the TRELOCK range. A dust cap protects the IN-X® inline cylinder. With a shackle length of 30cm, the U6 L is particularly suitable for locking the bike to fixed objects. The secure shackle made of hardened steel and the various mounting options on the bicycle frame with the bracket ZB 401 make the U6 L a valuable security companion.

**Insight International Corporation Ltd T/A Insight Security**  
Big Boy Telescopic Ground Anchor

The BigBoy heavy-duty telescopic ground anchor is designed to secure motorcycles, bicycles, and other valuable equipment and can be used with security chains up to 19mm thick. Weighing 9.8kg and made from 8mm thick high-quality steel it's a serious bit of kit, its compact design means it takes up very little space allowing it to be flush to the ground when not in use, preventing tripping hazards and making it less visible to potential thieves.

Ground Anchors & Security Posts			✓	

**Pragmasis Ltd**  
**Pragmasis Shed Shackle**

The Shed Shackle improves security for wooden sheds and is particularly suitable for securing bicycles. It reinforces such a large area of the wall of the shed so that it becomes a viable anchoring point, without needing a concrete floor. It is also at an ideal height to secure bicycles and helps to keep chains, etc. off the floor, making the security easier to use and at the same time harder to attack for the thief! British made. Easy DIY fit.

Pragmasis Anti-Pinch Pin  
(Motorbike Security)

The Anti-Pinch Pin helps you to use a decent-sized chain to secure a motorbike. The pin goes through the bike and the chain goes on the pin, with a padlock to hold it together. Ideal with large hollow rear axles: with the pin, you can use a shorter chain that is cheaper to buy and easier to handle! Upgraded Super, and Super Dooper Pins are now available, using special tungsten carbide inserts to deter grinder attacks – deal with 25mm chains.

**OBD PORT SECURITY**

**TVL Security Ltd**

TVL - Key Operated OBD Port Protector

Computers are fast becoming the most powerful tool in a thief's kit. They can use them to override your built-in immobiliser by connecting a laptop, PDA or EDI Key into the on-board diagnostics (OBD) socket and drive away undetected. The patented, lockable OBD Port Protector is a secure box covering your OBD port plug and opened either with a key or secure four-digit PIN. A simple and non-invasive installation means this is an effective quick-fix.

**Zefal**  
Zefal KTRAZ M18

Designed to protect an electric bike, the K-Traz M18 is an extremely strong chain with reinforced steel links and an integrated key lock. With a security level of 18/20 and a 10mm-thick hexagonal link, this lock is ideal to protect your bike in very high-risk areas. Its 1.10m length makes it easy to lock your bike to street furniture. The chain lock system is a small 14mm diameter U-shaped lock which is itself very resistant to shocks and torsion.

**WARRIOR**

### Warrior roadside hangars

The recently launched Warrior hangar is a modular design which eliminates key sharing and for safety the raised floor allows road gully waste to wash underneath. This keeps the storage area clean, and users do not have to step off the walkway to store or retrieve bicycles. Space saving with up to 14 bikes housed in just one parking space. BikeAway can maintain and manage the Warrior hangar with no ongoing costs to the authority.

**Locks 4 Vans**

Locks 4 Vans Hooklock - Gold (Van Deadlock)

The L4V Hook Lock has been specifically designed to provide an enhanced level of security. Locks 4 Vans have combined an anti-drill lock case with anti-corrosion properties. The hook bolt uses laminated technology to create a stronger mechanism that is more resistant to fracture and is considerably more rigid when in position. These features combine to deliver a locking solution that is robust against the latest attack methods.

**TVL Security Ltd**  
TVL - DeadLock Protect Plus

DeadLocks have been the go-to solution of choice over the years and with good reason – they're robust, reliable and versatile, able to fit a wide range of vehicles in any number of ways to best suit your needs. The deadlock is a secondary mortice lock, completely independent of the manufacturer's locking system. A high-security key throws a dead bolt into a specially designed keep, giving you a second layer of security to keep thieves at bay.

	S	G	D
Automotive		✓	

**TVL Security Ltd**  
TVL - ArmourShell

The ArmourShell is an external, semi-automatic lock with anti-drill inserts and a hardened steel locking bolt. It is available in two sizes and bolts to the doors of the van, holding them shut with a bullet cylinder. Usually fitted in the window area, the shape of the body deflects direct hammer blows. An anti-drill piece protects the cylinder from attack, and the inter-locking rear body chamfer protects the shells from being forced apart.

	S	G	D
Automotive		✓	

**Milenco Limited**

Milenco High Security Van Lock

The Milenco High Security Van Door Lock is made from hardened steel and fitted with an ultra-high security lock, there is no other van lock that offers this high level of strength and security. It has a flexible universal design for multiple mounting positions including doors, rear doors and side sliding doors.

	S	G	D
Automotive		✓	

**TVL Security Ltd**  
TVL - Hooklock Protect Plus

More strength, more protection, more control. Like the Deadlock, the HookLock puts you in control with a secondary mortice lock that works completely independently of the manufacturer's main system. Also, like the Deadlock, the Hooklock is operated by a high-security key. The key difference is that it works by throwing a hook into a specially designed keep, making it incredibly difficult to force apart.
